

Scraping Top Free Online Games of Y8 Games using Python

Y8 Games is a game publisher and game developer. The Y8 platform is a social network of 30 million players and growing.

The page [Y8 Games](#) provides a list of top online games on Y8 Games. In this we will download this information from this page using Web Scraping. Web Scraping is an automatic method to obtain large amount of data from websites using code. WE will use requests and BeautifulSoup libraries to scrape data from this page

Here's an outline of steps we'll follow:

1. Download the web page using requests.
2. Parse the html document using BeautifulSoup.
3. Extract Game Name, Technology used, Rating, Number of Players.
4. Compile extracted information into lists and dictionaries.
5. Read and save the extracted information as CSV files.
6. Combine data from multiple pages.

By the end of the project we'll create a csv file in the following format:

Game Name,Technology,Rating,No. of Players

Wacky Races: Highway Heroes,HTML5,79%,29354

Plane Racing Madness,WebGL,77%,12967

...

How to Run the Code

Use the "Run" button at the top of this page and select "Run on Binder" to execute the code. You can make changes and save your own version of notebook to [Jovian](#) by executing the following cells.

Download the webpage using requests

We'll use the `requests` library to download the webpage.

`requests` can be installed using `pip`.

```
!pip install requests --upgrade --quiet
```

```
import requests
```

The library is installed and imported

To download a page, we can use `.get` function from `requests`, which returns response

```
base_url = "https://www.y8.com/tags/racing"
response = requests.get(base_url)
```

`requests.get` function returns a response object containing the data of the webpage

The `.status_code` function is used to verify whether the response is successful or not.

If the status code lies between 200 - 299 it is successful else it results some errors.

```
response.status_code
```

```
200
```

`status_code` is successful we can get the contents of the page using `response.text`

```
page_contents = response.text
```

Lets check the number of characters on the page

```
len(page_contents)
```

```
284606
```

The page contains 284606 characters

now we are printing first 1050 characters of the page

```
page_contents[:1050]
```

```
'<!DOCTYPE html>\n<html class="no-touch" lang="en"\n      dir="ltr">\n  <head>\n    <met\n(NREUM={});NREUM.info={"beacon":"bam.nr-data.net","errorBeacon":"bam.nr-\ndata.net","licenseKey":"64ea7759b2","applicationID":"2972689","transactionName":"eltWERF\n</script>\n<script type="text/javascript">(window.NREUM||(NREUM={})).init={ajax:{deny_li\n{xpId:"VwcCU1ZVGwEJU1NUDwg=",licenseKey:"64ea7759b2",applicationID:"2972689"}};(()=>{var
```

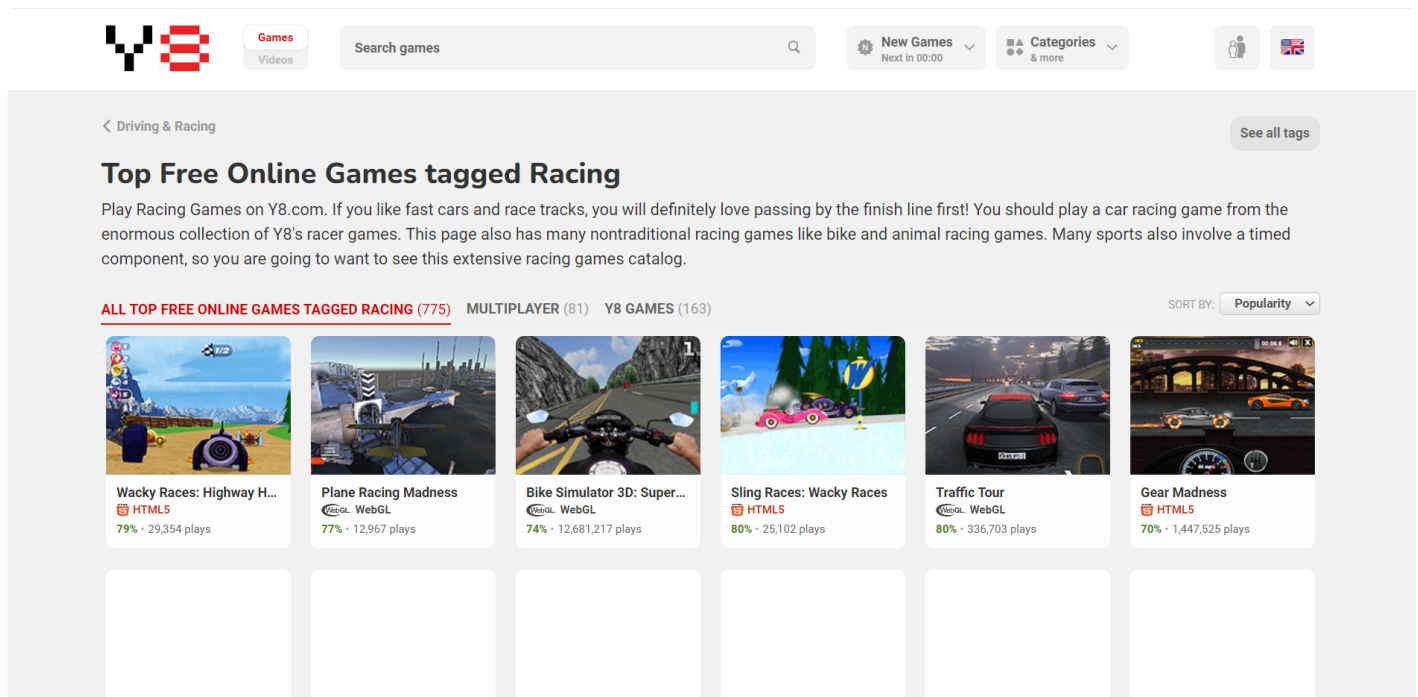

```
n=0,i=navigator.userAgent.match(/Firefox[\\\/\\s](\\d+\\.\\d+)/);i&&(n+=i[1]),6562:(e,t,
()=>k,1F:()=>H,Yu:()=>E,Dg:()=>g,CX:()=>f,GE:()=>w,sU:()=>L});var n={};r.r(n),r.d(n,{age
i=r(6797),o=r(909),a=r(8610)};class s{constructor(e,t){try{if(!e||"object"!==typeof e)retu
```

What we are looking at the above is the Html source code of the webpage

We can also save the file by using write as file function and we can view the page locally within jupyter using "file > open"

```
with open('Y8 Games.html', 'w') as file:
    file.write(page_contents)
```

The page looks like

We have successfully downloaded the webpage

We have to install and import BeautifulSoup library using pip

We'll use BeautifulSoup library to parse and convert it into a document

Parse the html document using BeautifulSoup

```
!pip install BeautifulSoup4 --upgrade --quiet
```

```
from bs4 import BeautifulSoup
```

The library is installed and imported

Now we have to read this file as html_source

```
with open('Y8 Games.html', 'r') as file:
    html_source = file.read()
```

```
html_source[:1000]
```

```
'<!DOCTYPE html>\n<html class="no-touch" lang="en"\n      dir="ltr">\n  <head>\n    <met  
(NREUM={});NREUM.info={"beacon":"bam.nr-data.net","errorBeacon":"bam.nr-  
data.net","licenseKey":"64ea7759b2","applicationID":"2972689","transactionName":"eltWERF  
</script>\n<script type="text/javascript">(window.NREUM||(NREUM={})).init={ajax:{deny_li  
{xpid:"VwcCU1ZVGwEJU1NUDwg=",licenseKey:"64ea7759b2",applicationID:"2972689"}};(()=>{var  
n=0,i=navigator.userAgent.match(/Firefox[\\\/\\s](\\d+\\.\\d+)/);i&&(n+=i[1])},6562:(e,t,  
()=>k,lF:()=>H,Yu:()=>E,Dg:()=>g,CX:()=>f,GE:()=>w,sU:()=>L});var n={};r.r(n),r.d(n,{age  
i=r(6797),o=r(909),a=r(8610);class s{constructor('
```

Now let us check the first 1000 characters of the html_source

Now we are parsing the document

```
doc = BeautifulSoup(html_source, 'html.parser')
```

```
doc.find('a')
```

```
<a aria-label="logo" class="no-event" href="https://www.y8.com/">  
</a>
```

The above code prints the first a tag from the document

Now we are defining a reusable function in order parse and extract data from Y8 games html file

```
def get_topic_page(url):  
    topic_url = 'https://www.y8.com/tags/' + url  
    response = requests.get(topic_url)  
    if response.status_code != 200:  
        print('status Code =', response.status_code)  
        raise Exception('Failed to Fetch Web Page' + topic_url)  
    # Construct Beautiful Soup Document  
    topic_doc = BeautifulSoup(response.text)  
    return topic_doc
```

```
get_topic_page('racing')
```

```
<!DOCTYPE html>  
<html class="no-touch" dir="ltr" lang="en">  
<head>  
<meta charset="utf-8"/>  
<script type="text/javascript">window.NREUM||(NREUM={});NREUM.info={"beacon":"bam.nr-dat  
data.net","licenseKey":"64ea7759b2","applicationID":"2972689","transactionName":"eltWERF  
<script type="text/javascript">(window.NREUM||(NREUM={})).init={ajax:{deny_list:["bam.nr

```

```
</html>
<!-- 2023-03-03 11:27:14 UTC -->
```

What we are looking above is the html source code

We have successfully parsed and extracted data from html file

Now we have to extract game name, technology used, rating, Number of players from the above extracted file.

Extract Game Name, Technologu used, Rating, Number of Players

Now we are filtering all `div` tags with class = 'item thumb videobox grid-column'

```
div_tags = doc.find_all('div', class_= 'item thumb videobox grid-column')
```

```
len(div_tags)
```

64

The length of the `div_tags` is 64, that means it consists of 64 `div` tags with class_= 'item thumb videobox grid-column'

`div_tags[0]` prints the first `div` tag

```
div_tag = div_tags[0]
```

```
div_tag
```

```
<div class="item thumb videobox grid-column" data-item-id="179868" data-label-ids="1
Player,Car,Cartoon,Driving,HTML5,Racing,Touchscreen,Android game,Mobile,iPad,iPhone" dat

movie="https://img.y8.com/cloud/v2-y8-video-previews-001/videos/142926/c3345c20a1591d37c
1589787075" id="item_179868">
<a href="https://www.y8.com/games/wacky_races_highway_heroes" title="Wacky Races: Highwa
Y8.com">
<input id="for-girls-179868" name="for-girls-179868" type="hidden" value="false">
<div class="item__thumbarea">
<div class="item__microthumb"></div>
<div class="item__img-container">
</div>
</div>
<div class="item__infos">
<h4 class="item__title ltr">Wacky Races: Highway Heroes</h4>
<div class="item__technology">
<p class="html5">
    HTML5
  </p>
</div>
<p class="item__rating">
<span class="item__number">
    79%
  </span>
</p>
<p class="item__plays-count">
    29,354 plays
  </p>
</div>
</input></a></div>
```

Here h4 is the child tag of the div tag

h4 tag contains the name of the game

```
h4_tag = div_tag.find('h4')
game_name = h4_tag.text.strip()
```

```
game_name
```

```
'Wacky Races: Highway Heroes'
```

This is the game name of the first div tag, if we represent div_tags(1) it prints the game name of the second div tag

Now we have identify the technology used to develop the game.

To do that we have to inspect at the place where type of technology used.

From that we'll get type of tag and class which is 'div', class_='item__technology'

We have to find this from the parent tag

```
div_tech_tag = div_tag.find('div', class_='item__technology')
technology_type = div_tech_tag.text.strip()
```

```
technology_type
```

'HTML5'

Here it represents the type of technology used to develop the game

Now we have to identify and filter the rating for the game

To identify that we have to inspect at the place where rating contains, from where we'll get the type of tag and class

The type of tag and class for rating is 'span', class_='item__number'

We have to find this from the parent tag

```
span_tag = div_tag.find('span', class_='item__number')
rating_tag = span_tag.text.strip()
```

rating_tag

'79%'

The above value represents the rating in percentage

Now we have to identify and filter the players count of the game

To identify that we have to inspect at the place where players count contains, from where we'll get the type of tag and class

The type of tag and class for players count is 'p', class_='item__plays-count'

We have to find this from the parent tag

```
p_tag = div_tag.find('p', class_='item__plays-count')
players_count = p_tag.text.strip()[:-6].replace(',', '')
```

players_count

'29354'

The above value represents the players count

Now we have to write and define reusable functions from the above cells

```
def parse_top_games(div_tag):
    # <div> tag contains game name, technology used, rating, No.of Players
    h4_tag = div_tag.find('h4')
    # Game Name
    game_name = h4_tag.text.strip()
    # Technology Used
    div_technology_tag = div_tag.find('div', class_='item__technology')
    technology_tag = div_technology_tag.text.strip()
    # Rating
    span_tag = div_tag.find('span', class_='item__number')
```

```

rating_tag = span_tag.text.strip()
# No.of Players
p_count_tag = div_tag.find('p', class_= 'item__plays-count')
player_count_tag = p_count_tag.text.strip()[:-6].replace(',', ' ')
# Return Dict
return {
    'Game Name' : game_name,
    'Technology': technology_tag,
    'Rating': rating_tag,
    'No.of Players': player_count_tag
}

```

```
parse_top_games(div_tags[1])
```

```

{'Game Name': 'Plane Racing Madness',
 'Technology': 'WebGL',
 'Rating': '77%',
 'No.of Players': '12967'}

```

Here we have extracted the data of the second top online games

```
parse_top_games(div_tags[2])
```

```

{'Game Name': 'Bike Simulator 3D: SuperMoto II',
 'Technology': 'WebGL',
 'Rating': '74%',
 'No.of Players': '12681217'}

```

Here we have extracted data of the third top online games.

We have successfully extracted the data of particular games.

Now by using list comprehension method we have to print the list or dictionary of Top Online Games.

Compile extracted information into lists and dictionaries

```
top_games = [parse_top_games(tag) for tag in div_tags]
```

```
top_games
```

```

```

We have successfully extracted the list of games data

Now we have to read and save the extracted data into csv format

Read and save the extracted information as CSV files

Here we have defined a write_csv function to separate keys and values from dictionary

```
def write_csv(items, path):  
    # Open the file in write mode  
    with open(path, 'w') as f:  
        # Return if there's nothing to write  
        if len(items) == 0:  
            return  
  
        # Write the headers in the first line  
        headers = list(items[0].keys())  
        f.write(','.join(headers) + '\n')  
  
        # Write one item per line  
        for item in items:  
            values = []  
            for header in headers:  
                values.append(str(item.get(header, "")))  
            f.write(','.join(values) + "\n")
```

By assigning the above extracted data in items and giving path we will get a csv file which is saves as path name

```
write_csv(top_games, 'Y8 Games.csv')
```

```
with open('Y8 Games.csv', 'r') as file:  
    print(file.read())
```

```

As of now we have successfully extracted data from two web pages

Now we have to combine them into a single file

Combine data from multiple pages

```
import pandas as pd
```

We have successfully imported the pandas

```
racing = pd.read_csv('racing.csv', index_col=False)
```

By reading the csv file using pandas we can create a data frame.

Which is shown below.

```
racing
```

64 rows × 4 columns

We have successfully created two data frames.

Now to join those two files we are using concat function.

```
concat_file = pd.concat([racing, racing1])
```

```
# pd.set_option('display.min_rows', None)
concat_file
```

128 rows × 4 columns

We have successfully joined the two files using concat function

Summary

Here's what we have covered in this notebook:

1. Download the web page using requests.
2. Parse the html document using BeautifulSoup.
3. Extract Game Name, Technologu used, Rating, Number of Players.
4. Compile extracted information into lists and dictionaries.
5. Read and save the extracted information as CSV files.
6. Combine data from multiple pages.

Future Work

- We can now fetch different categories of pages, and get the list of top games for each category.
- We can scrape the games page to get additional information about each game.
- We can analyze this data to fetch the list of top online games from different categories like action, adventure, combat, shooting etc..

References

- [Web Scraping](#)
- [requests](#)
- [BeautifulSoup](#)
- [Pandas tutorial](#)
